

## **Problem statement**

Cruella de vil is facing a huge problem with keeping her fur coats safe from the weather. The rain makes the fur rough and hard to detangle. Which makes it end up looking cheap. We want to predict the weather at least 80% of the time to protect the coat's integrity before the Paris fashion show in October 2024.

## **Context**

Cruella De vil is a prominent fashion designer that has been rumored to be a dog murderer. We know that that's such a conspiracy theory because the fur is clearly "vegan" and that's been proven since she came to ask for our help since the vegan fur gets tangled and starts looking cheap when dealing with harsh weather. She's been wearing the coats extensively since black and white coat designs can only go so far and she's been broke since disney is dealing with backlash lately and can't pay for her coats maintenance. She came to us with the hope of lowering the damage that the coats take from the weather everyday so she can wear it again in Paris fashion week. I hope we get paid.

## **Criteria for success**

Predicting rainy days by 80%.

## **Scope of solution**

Weather prediction in Disney world.

## **Constraints within solution scope**

Maleficent not providing enough weather data to upstage cruella

## **Stakeholders to provide key insights**

Mickey mouse  
Winnie the pooh  
Stitch

## **Key data sources**

Weather data
